

RISHABH KUMAR

Computer Science Undergraduate | Software Engineer | Full-Stack Developer

+91-9306208755 • kumar.r.070706@gmail.com • [linkedin.com/in/rishabhkumaar](https://www.linkedin.com/in/rishabhkumaar) • github.com/rishabhkumaar

EDUCATION

Lovely Professional University — Phagwara, Punjab **CGPA: 9.89/10**

B.Tech, Computer Science & Engineering | 2025 – Present

PM Shree Kendriya Vidyalaya No. 2 — Ambala Cantt **90.6%**

Higher Secondary Education | 2023 – 2024

TECHNICAL SKILLS

Languages: Python, C++, C, JavaScript, TypeScript, HTML, CSS

Frameworks & Libraries: React, Next.js, Tailwind CSS, discord.py, discord.js, Redux Toolkit, Prisma, PDF.js, Chart.js

Databases: PostgreSQL, MySQL, MongoDB, Firebase Firestore

APIs & Platforms: REST APIs, Discord API, OpenAI API, OpenWeatherMap API, Discord OAuth, Firebase Authentication

Engineering: Authentication, OAuth, API Integration, Caching, Rate Limiting, Async Programming, Database Connection Pooling, Modular Architecture

Tools: Git, GitHub, VS Code, Vercel, Netlify

SELECTED ENGINEERING PROJECTS

RISHOURCE — Discord Bot & Management Platform [GitHub](#)

Python · discord.py · Next.js · TypeScript · PostgreSQL · Prisma · OpenAI

- Architected a modular Discord automation platform spanning moderation, AI, weather, air quality, games, utilities, ticketing, leveling, logging, and server management through independently organized Cogs.
- Re-engineered the bot around AutoShardedBot, dynamic extension discovery, asynchronous PostgreSQL connectivity, centralized configuration, and shared OpenAI infrastructure to organize feature loading and runtime services.
- Implemented Discord OAuth and permission-aware guild discovery, connecting authenticated users to server-specific controls through Discord guild APIs and a Next.js dashboard.
- Optimized guild retrieval with a 15-minute Node-Cache TTL and rate-limited forced refreshes, returning cached data when external Discord refreshes fail.
- Developed interactive workflows with buttons, modals, embeds, and pagination; established structured logging with 5 log levels, persistent file output, caller metadata, exception details, rotation, and backups.

COURSES GLANCE — Course & PDF Study Platform [GitHub](#)

JavaScript · PDF.js · Firebase Authentication · Firebase Firestore

- Architected an authenticated academic resource platform around 9 structured courses, centralizing course-specific PDF learning material through a responsive dashboard.
- Integrated PDF.js for browser-based rendering with page navigation, zoom, thumbnails, text search, lazy rendering, bookmarks, and responsive mobile viewing.
- Engineered persistent annotations by converting selected text into normalized page coordinates, allowing highlights to be reconstructed accurately across document sessions.
- Synchronized highlights, bookmarks, reading position, and zoom state with Firebase Firestore while enforcing user-scoped access through Firebase Authentication and Firestore security rules.

PORTFOLIO 2.0 — UbuntuOS Web Environment [GitHub](#)

Next.js · React · Tailwind CSS · JavaScript · react-draggable

- Engineered an Ubuntu 20.04-inspired browser desktop that transforms a conventional portfolio into a multi-application operating environment.
- Developed a reusable window manager supporting dragging, minimizing, maximizing, restoring, closing, focus management, and z-index control across concurrent applications.
- Orchestrated an application registry connecting desktop shortcuts, dock entries, metadata, and dynamically rendered application components into the shared window system.
- Persisted desktop and application state through LocalStorage and embedded functional Terminal, Calculator, Chrome, VS Code, Spotify, Settings, Trash, and portfolio interfaces.

WEATHER NOW — Real-Time Weather Dashboard [GitHub](#)

HTML · CSS · JavaScript · OpenWeatherMap · Chart.js

- Engineered a responsive weather dashboard retrieving current conditions and approximately 5 days of 3-hour forecast data for searched cities and predefined coordinates.
- Visualized 10+ environmental attributes and up to 40 forecast intervals through dynamically generated weather cards and a dual-axis Chart.js temperature/humidity graph.
- Implemented rule-based weather recommendations and SVG/CSS indicators for cloud coverage, atmospheric pressure, and wind gusts; deployed the application through Netlify.

ACHIEVEMENTS

- **200+** programming problems solved across online coding platforms
- **Gold in Python** and Silver in C & SQL on HackerRank
- **50 Days Badge** earned on LeetCode
- **Multiple skill badges** earned on LeetCode, including Mathematical I, Data Navigator, and Introduction to Pandas

CERTIFICATIONS

- Complete Web Development Course — Udemy | 100 hrs | 2026
- Computer Programming — LPU / iamneo | 150 hrs | 2026
- Programming Fundamentals using Python — Infosys Springboard | 2026
- Introduction to Modern Database Systems — Saylor Academy | 29 hrs | Grade: 86% | 2026
